DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, are drawn to a method, classified in class 423, subclass 632.
- II. Claims 11-12, are drawn to a method, classified in class 427, subclass 127.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related to acicular magnetic iron oxide particles. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, Group I relates to a method of making the acicular magnetic iron oxide particles, and Group II relates to a method of make a product, wherein the acicular magnetic iron oxide particles are a material used to make the product.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

During a telephone conversation with Matthew Mulkeen on 3/15/2006 a provisional election was made without traverse to prosecute the invention of Group I,

claims 1-10. Claims 11-12 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Matthew Mulkeen on 3-7-2006.

The application has been amended as follows:

With respect to Claim 1 delete the words "single-step simple and economical" and "by known method".

Cancel Claims 11 and 12.

Change the word "SO" in the paragraph 55 of the specification to "50".

The following is an examiner's statement of reasons for allowance: Claim 1 has the limitation of soaking polymer gel for a period ranging from 4-6 minutes into sodium hydroxide solution of strength ranging between 2-2.5 M under an external magnetic field ranging between 800-1500 Gauss, which is not taught by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sinha (US 2003/0185748) teaches a process for the preparation of nanosized iron oxide by biomimetic route.
